

Engineering.
Procurement.
Construction.

ABOUT US

INFRAPATH INDIA LLP is a Surat-based engineering, procurement and construction (EPC) company working across highway, railway and bridge infrastructure, electrical and power works, and solar installation.

Our work began in 2018 with precast components for National Highway projects, followed by structural sub-contracting on NH packages. Over the years this grew into railway bridges, foot-over-bridges, staff quarters, State Highway works, and river and major bridge projects across Gujarat and beyond.

This experience was built and delivered through our earlier entities Wadiwala Construction and Khodal Enterprise - which executed structure works, friction slab with crash barrier, retaining walls and drain works for some of India's leading infrastructure contractors. In 2022 we formally expanded into electrical and power infrastructure, and into solar installation in 2023.

In 2026, all operations were brought together under a single entity INFRAPATH INDIA LLP - giving our clients one company, one point of accountability, and a stronger platform for growth.

A new name,

eight years of
completed work.

8+ Years in Infrastructure

3 Business Verticals

2 Legacy Entities Unified

PAN-India Project Presence

VISION

To be recognised among India's most dependable infrastructure partners - building highways, bridges and power systems that serve communities for decades, while contributing to a cleaner energy future.

MISSION

- Execute every package to the standard we would want on our own project.
- Keep one team accountable from first site visit to final handover.
- Protect timelines and budgets through planning, not through firefighting.
- Work safely, and leave the sites and communities we operate in better than we found them.

OUR VALUES

Safety	Structured site practices protect people and property throughout execution.
Quality	Consistent workmanship standards across engineering, procurement and construction.
Sustainability	Contributing to India's shift toward clean, solar-powered infrastructure.
Reliability	Transparent communication and dependable delivery on every project.

OUR BUSINESS VERTICALS

Three integrated delivery lines,
one execution standard

01

HIGHWAY, RAILWAY & BRIDGE INFRASTRUCTURE & NBSP

- Precast works for National Highway projects
- NH structural works as a sub-contractor
- Railway bridges, FOB & staff quarters
- State Highway works across Gujarat
- River & major bridge works
- Bridge repair & maintenance work

02

ELECTRICAL & POWER WORKS & NBSP

- HT/LT power line shifting for infrastructure projects
- Transmission & distribution line works
- Electrical works for power supply infrastructure
- Utility relocation support for highway & bridge projects
- End-to-end power infrastructure execution

03

SOLAR INSTALLATION & NBSP

- Rooftop and ground-mounted solar installation
- Commercial solar installation & commissioning
- Structure, mounting and module installation
- Delivery for large corporate sites

HIGHWAY, RAILWAY & BRIDGE INFRASTRUCTURE

Our founding vertical and the backbone of the company.

We work as a specialist structure and sub-contracting partner to principal contractors on National Highway, State Highway, expressway and railway packages - from precast yard production to complete on-site structure execution.

SCOPE OF WORK

- Structure works - VUP, LVUP, minor bridges (MNB), major bridges (MJB) and ROB
- Friction slab with crash barrier - both cast-in-situ and precast
- Precast works - precast items and casting yard production for NH projects
- Retaining walls - all types, including RE wall support works
- Drain works - all types of highway and roadside drain construction
- Railway infrastructure - railway bridges, foot-over-bridges and staff quarters
- River & major bridge works across Gujarat
- Bridge repair & maintenance for existing structures

From a single structure to a full package, our teams take the scope end to end - reading the drawings, planning the sequence, and delivering the work to programme without the client having to chase it.

ELECTRICAL & POWER WORKS

Highway and bridge projects rarely move without power lines moving first. We formalised this vertical in 2022 so our clients no longer need a separate agency for utility shifting - the same team that builds the structure clears the corridor for it.

SCOPE OF WORK

- HT/LT power line shifting for infrastructure projects
- Transmission & distribution line works
- Electrical works for power supply infrastructure
- Utility relocation support for highway and bridge corridors
- Erection, stringing and commissioning support
- End-to-end power infrastructure execution

Fewer interfaces

One contractor for structure and utility shifting

Fewer delays

Utility clearance planned into the construction programme, not after it

Single accountability

No gap between civil and electrical scope

SOLAR INSTALLATION

Added in 2023, our solar vertical brings the same structural discipline to clean energy. We handle installation end to end - mounting structure, module installation, and commissioning support — for commercial and industrial sites.

SCOPE OF WORK

- Rooftop solar installation for commercial and industrial buildings
- Ground-mounted solar installation
- Mounting structure fabrication and erection
- Module installation and alignment
- Cabling, testing and commissioning support
- Delivery for large corporate sites
- Post-installation support and maintenance coordination

A practical contribution to India's shift toward clean,
solar-powered infrastructure
- delivered with the same site discipline as our highway work.

OUR PROJECT PROCESS

A structured process from first site visit to final handover

1

Site Assessment & Design

Site visit, survey and evaluation of conditions. Drawings and methodology reviewed with the client and engineered to suit the project.

2

Planning & Mobilisation

Schedule, manpower deployment and equipment plan finalised. Site setup, yard and access established.

3

Procurement & Logistics

Materials and equipment sourced and coordinated to reach site on schedule, without holding up the front.

4

Execution & Quality Control

On-site work executed by experienced teams under supervision, with stage-wise quality checks and structured safety practices.

5

Testing & Commissioning

Performance and safety verified before handover, with the client walked through every checkpoint.

6

Handover & Support

Documentation completed and handed over. We remain available after completion.

CAPABILITIES & RESOURCES

In-house teams and equipment - mobilised and ready

Owning our own manpower and plant means we mobilise faster, hold the programme in our own hands, and do not pass delays back to the client as someone else's problem.

MANPOWER

- Civil Engineers
- Site Supervisors
- Electricians
- Mechanics & Machinery Operators
- Skilled & Semi-Skilled Workforce

PLANT & EQUIPMENT

- Shuttering & formwork
- Lifting & handling equipment
- Site vehicles & transport
- Power & site utilities
- Casting yard capability

REGISTRATIONS & COMPLIANCE

- GST registered in the states we operate.
- LLP registration and statutory documentation available on request
- Statutory labour, safety and site compliance maintained on every project
- Documented quality checks at material, execution and handover stages

KEY CLIENTS

Trusted by leading infrastructure,
construction & EPC companies across India
